EMAIL AND DOMAIN FOOTPRINTING

CO2 - Assessment 1 | Ethical Hacking | Slot A

Assigned organization	Intel Corporation
Domain	www.intel.com
Register number shown in assignment	192312542
Date of research	26 October 2026
Student name / signature	_____

Objective and method

The assignment asks for domain and email footprinting with theHarvester. This report records a small passive sample from publicly indexed Intel sources. It does not claim a complete inventory. Email counts are limited to role-based addresses published on official Intel pages; individually named employee addresses are not reproduced. Hosts are hostnames visible in official public pages and are not asserted to be live. No DNS resolution, zone transfer, brute force, port scan, or direct host contact was performed.

Tool execution and evidence status

TheHarvester was not installed or run, so no command-execution screenshot or genuine tool-output screenshot is available. The official project guidance describes it as an OSINT tool and says to use it only on targets owned or explicitly authorized for testing. The assignment lists Intel as an assigned domain, but this brief does not document authorization from the domain owner. Counts below are therefore a passive public-source sample, not theHarvester output.

Results summary

Required field	Result in this sample	Count
Domain name	www.intel.com	1
Emails found	dataprotectionofficer@intel.com; investor.relations@intel.com	2
Sub emails found	No additional role-based email mapped to a listed subdomain in this sample	0
Subdomains / hosts	consumer.intel.com; signin.intel.com; api-portal.intel.com; builders.intel.com; supplier.intel.com	5
Hosts with IP addresses	No addresses resolved or verified	0
Total email addresses found	Role-based addresses only; sample, not exhaustive	2
Total subdomains found	Listed hostnames ending in .intel.com	5
Total hosts found	Unique listed hostnames	5
Total IP addresses found	No IP addresses collected	0

Findings and interpretation

Role-based email addresses

1. Intel Privacy Notice publishes dataprotectionofficer@intel.com for privacy inquiries.
2. How Do I Contact Intel Investor Relations? publishes investor.relations@intel.com for investor inquiries.

Hostnames visible on official pages

consumer.intel.com - Intel Unified Login

signin.intel.com - Intel password reset

api-portal.intel.com - Intel API Portal sign-in

builders.intel.com - Intel Network Builders sign-in help

supplier.intel.com - Intel supplier login migration

Security and social-engineering analysis

Published role addresses, sign-in hostnames, and support terminology can make a fraudulent account-recovery or supplier-support message sound credible. An attacker could imitate a known hostname, send a false MFA reset notice, or use a public contact route as a pretext. These findings are ordinary public information and do not demonstrate a vulnerability or compromise.

Recommended countermeasures

Users should type the official domain or use trusted bookmarks, check the complete hostname before entering credentials, avoid sharing passwords or one-time codes, and verify unusual account or payment requests through a known channel. Organizations should use strong MFA, maintain clear official support routes, and train staff to verify sensitive requests independently.

Reproducible authorized-lab procedure

If the instructor or domain owner has provided written authorization and a configured environment, install theHarvester using the current official installation guide, review available sources with its help command, and run only the approved target and passive sources. Save the unaltered terminal output and capture genuine screenshots of the command and results. Do not use “all” or additional sources unless they are within the authorization scope.

Official project instructions: theHarvester README and usage guidance.

Screenshot of command execution: Not available - the tool was not run.
Screenshot of theHarvester output: Not available - no output was generated.

Conclusion

This sample identified two public role-based email addresses and five Intel subdomains visible in official pages. No subdomain-specific addresses or IP addresses were verified. These figures are limited to the listed sources and are not exhaustive. Completing the assignment’s requested tool screenshots requires an authorized theHarvester run.
